

LIBRARY BOOK REQUEST SYSTEM

SERVICENOW

Objective

The objective of the **Library Book Request System** project is to automate and streamline the process of requesting books from a college library. The application enables students to submit book requests online, automatically generates unique request numbers, validates issue dates, notifies librarians when requests are submitted, and allows librarians to approve or reject requests.

The system also sends automated email notifications to students regarding the status of their requests, maintains centralized records of all book requests, and provides reports and dashboards for monitoring request activities. By automating the book request workflow using the ServiceNow platform, the system improves efficiency, reduces manual paperwork, enhances communication between students and librarians, and ensures effective management of library book requests.

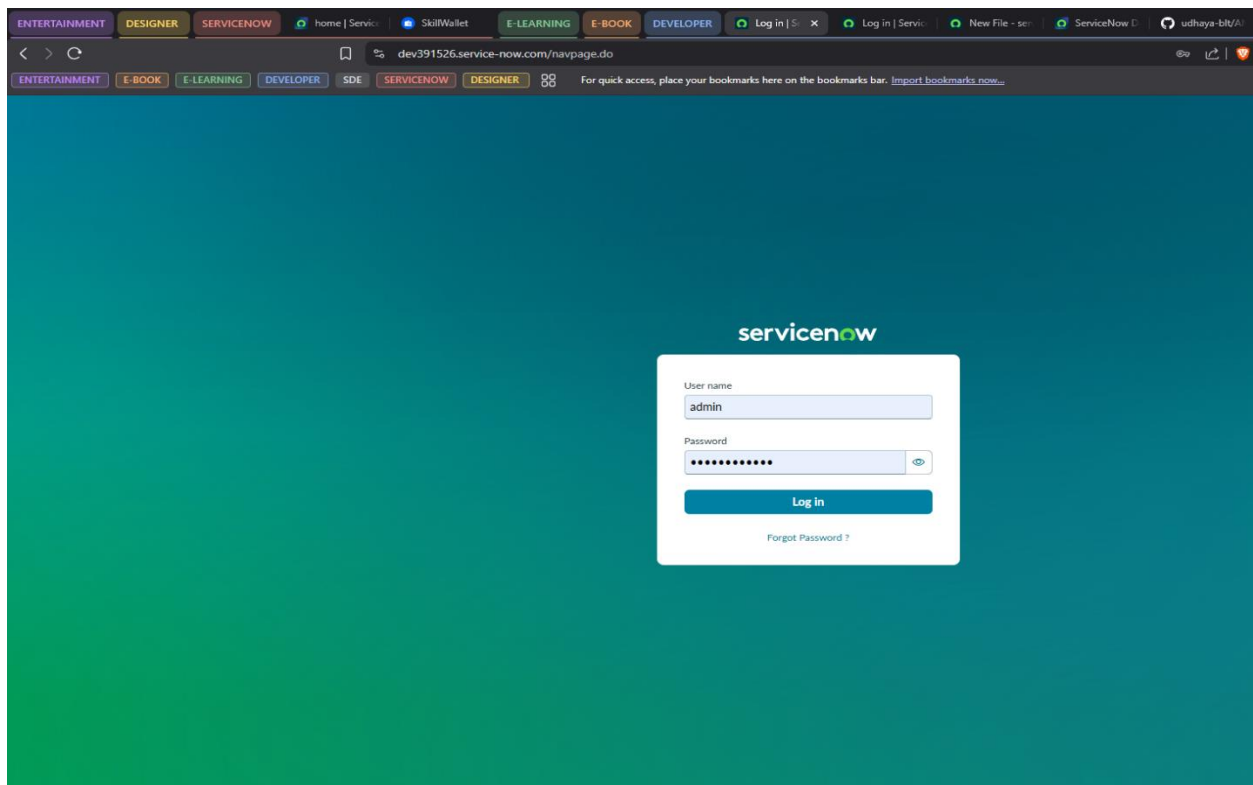

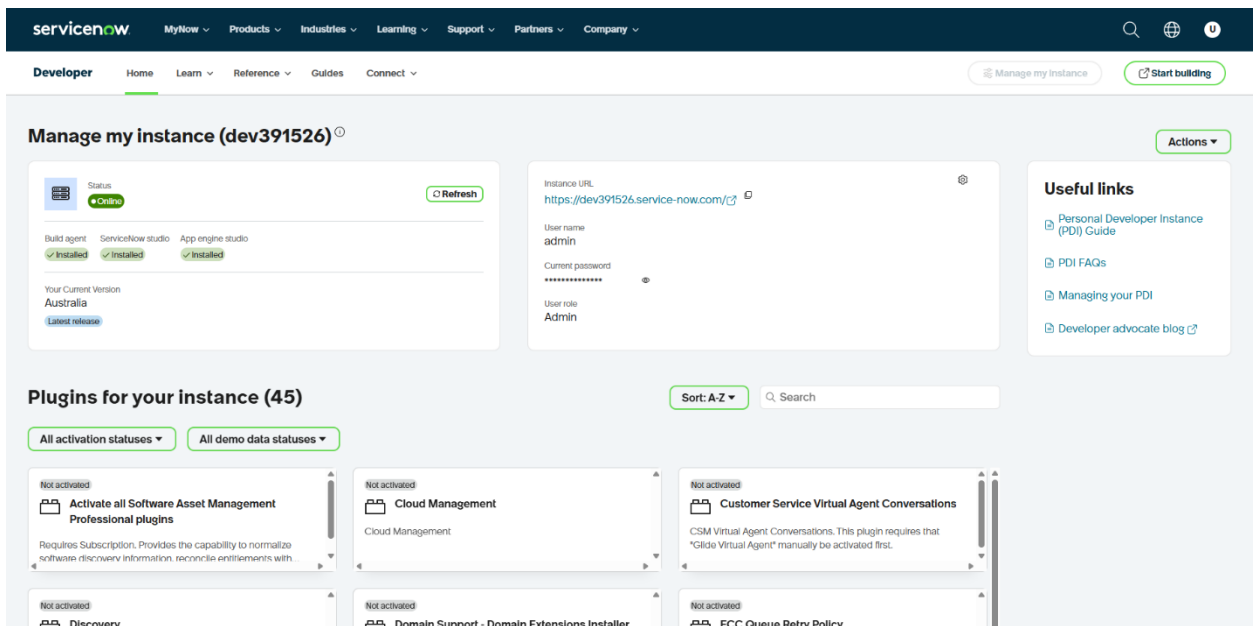

Milestone 1: Project Planning and Environment Setup

Objective

To prepare the ServiceNow development environment and establish the foundation for the **Library Book Request System application**. This phase includes setting up the ServiceNow instance, creating the scoped application, and planning the database structure required for managing visitors and employee hosts.

Step 1: Create Personal Developer Instance (PDI)

1. Visit developer.servicenow.com.
2. Sign in or create a developer account.
3. Request a Personal Developer Instance.
4. Wait for instance activation.
5. Login using admin credentials.

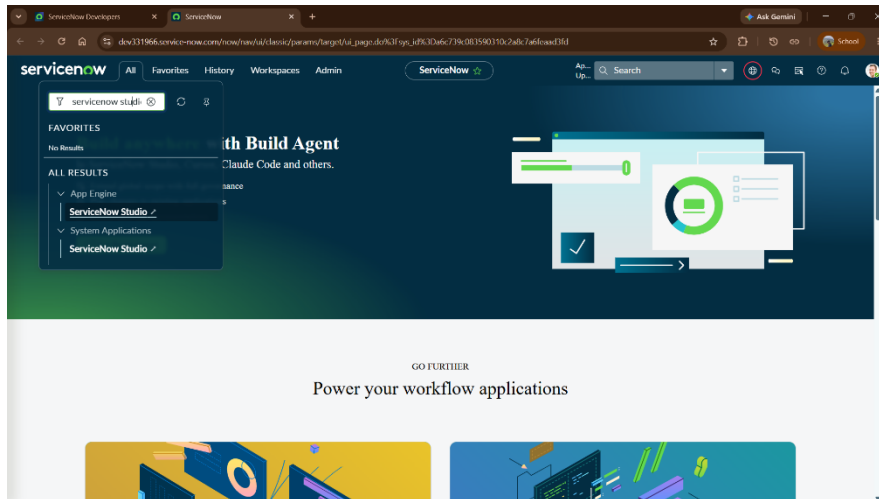

Step 2: Create Scoped Application

Navigation:

System Applications → Studio

1. Open Studio.
2. Select Create Application.

3. Enter:
 - Application_Name
Library Book Request system
 - Scope: Auto-generated by ServiceNow
4. Click Create.

You can also add a thumbnail image.

Learning Outcomes

- Understood ServiceNow architecture and application development lifecycle.
- Created and managed a scoped application.
- Configured the ServiceNow development environment.
- Learned ServiceNow Studio fundamentals.
- Understood table creation and relationship management.
- Gained experience in designing custom applications.
