

Milestone 4: Flow Designer Implementation

Objective

Automate approval processing through Flow Designer.

Flow Name

Library Book Approval Flow

Trigger

When a Library Book Request record is created or updated.

Flow Logic

IF Status = Approved

→ Send Approval Email

ELSE IF Status = Rejected

→ Send Rejection Email

ELSE IF Status = Pending

→ Send Submission Notification

The screenshot displays the ServiceNow Workflow Studio interface for a workflow titled "Library Book Approval Flow". The workflow is currently active. The left sidebar shows the "TRIGGER" section with "Library Book Request Created or Updated" and the "ACTIONS" section with a decision diamond followed by three "Send Email" actions based on the decision outcome: "approved", "rejected", and "pending". The right sidebar shows the "Data" pane with a list of flow variables: "Library Book Request Rec..." (Record), "Changed Fields" (Array/Object), "Library Book Request Table" (Table), "Run Start Time UTC" (Date/Time), and "Run Start Date/Time" (Date/Time). Below these are three conditional steps: "1 - If", "2 - Send Email", and "3 - Else If", each with an "email" variable (Record) and an "Action Status" variable (Object). The bottom of the screen shows a Windows taskbar with various application icons and a system clock indicating 11:09 AM on 6/18/2026.

Learning Outcomes

- Created automated workflows.
 - Implemented decision-based processing.
 - Integrated notifications.
-
